Make room for a longer thought.

A design system, visual concepts, and an AI engineering handoff for a Markdown-first social network.

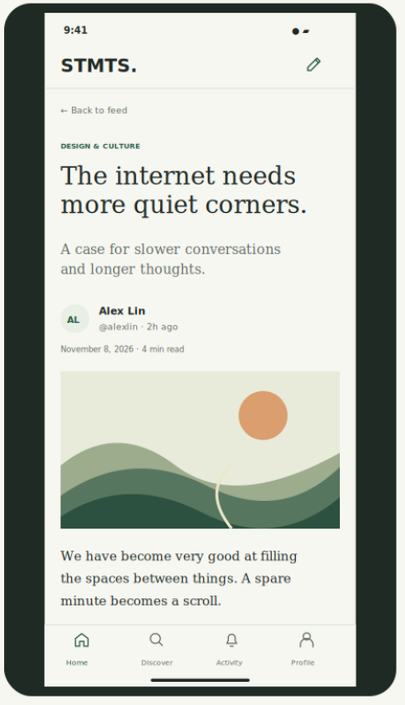

STMTS / NATIVE SCREEN STUDIES

A familiar voice.
Native to every screen.

iOS · Following

iOS · Long-form reader

Android · Dark theme

ANGULAR WEB / NATIVE iOS & iPadOS / NATIVE ANDROID

Three directions. One clear baseline.

Paper / Forest is recommended for implementation. The other two explore a sharper and a more intimate personality.

STMTS / THREE VISUAL DIRECTIONS

Make room for a longer thought.

01 / Paper & Forest

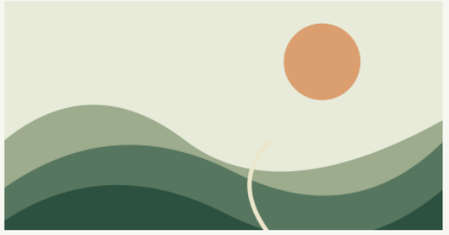

STMTS.

FOLLOWING / DISCOVER

Alex Lin · 2h

The internet needs more quiet corners.

A little less noise. A little more room for ideas to take their shape.

Design & culture 4 min read ↗

Recommended: 01 Paper & Forest. Alternatives are explorations, not additional production themes.

An editorial identity, quietly social.

Typography and authorship carry the experience. A passing observation and a considered essay belong to the same network.

Let the words lead.

Use an expressive serif for document titles and reading, with clear system sans controls. Keep the article, not the engagement count, at the top of the hierarchy.

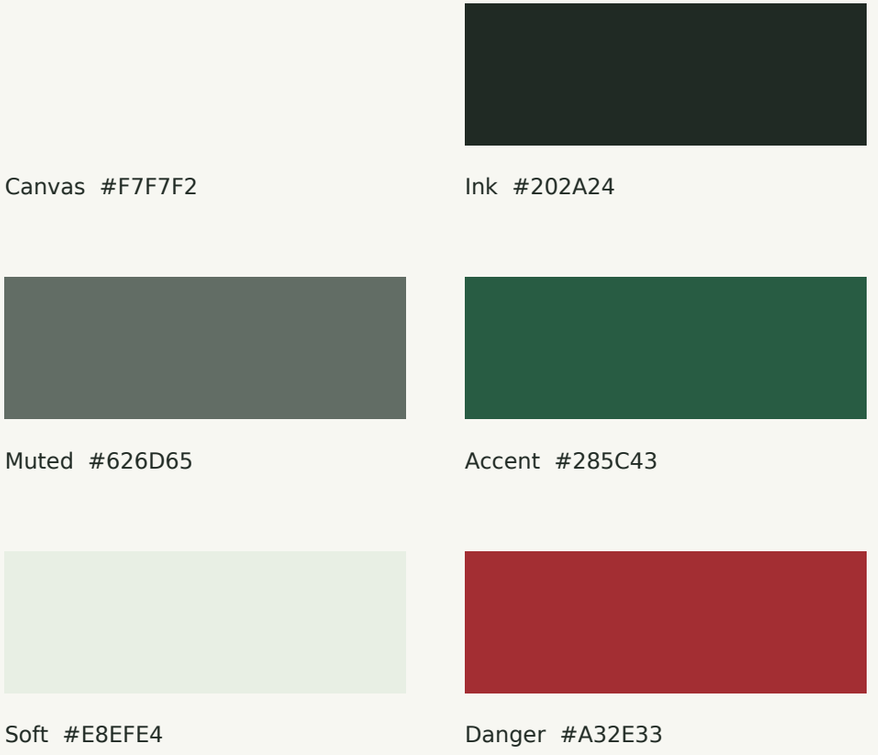

Social, at your pace.

Following and Discover stay distinct. Quiet reactions, explicit video play, thoughtful replies, and a clear path back to reading.

Write once. Read anywhere.

Store Markdown source with a versioned dialect. Share structured rendering rules; use native navigation, selection, pickers and accessibility behavior on each platform.

Semantic light palette

Dark mode uses independent semantic pairs. Always pair accent with on-accent; never assume white text.

Comfortable enough to stay a while.

System font fallbacks keep the kit self-contained. Match the hierarchy across platforms rather than forcing identical glyphs.

A statement, clearly made.

Reading body: serif, 20px / 1.7. Keep a comfortable measure of up to 68 characters and let paragraphs breathe. The content should feel considered without feeling precious.

Interface: system sans / 16px / 1.5

Metadata: system sans / 13px / 1.5

Code: system monospace / 14px / 1.6

Type must adapt.

Support web zoom, Dynamic Type, Android font scaling, RTL, long labels and narrow windows. Never set fixed heights on text containers.

Spacing

4 · 8 · 12 · 16 · 24 · 32 · 48 · 64 · 96 logical units. Native values map to pt/dp.

Geometry

10-unit control corners, 12-unit media corners, 16-unit sheets. Circular avatars. Prefer whitespace and rules to floating cards.

Small controls. Explicit states.

Use shared semantic tokens and accessible names. Every important state needs visible feedback and a path forward.

Write a statement **Following** **Retry upload**

Actions

Use explicit desired-state like/save/follow mutations. Optimistic state rolls back on failure; buttons expose pressed state.

Fields and validation

Use persistent labels, inline guidance and visible errors. Essential input boundaries use the muted token for contrast.

Loading and empty states

Bounded skeletons and a useful next action. Retry retains context. Reduced motion disables shimmer.

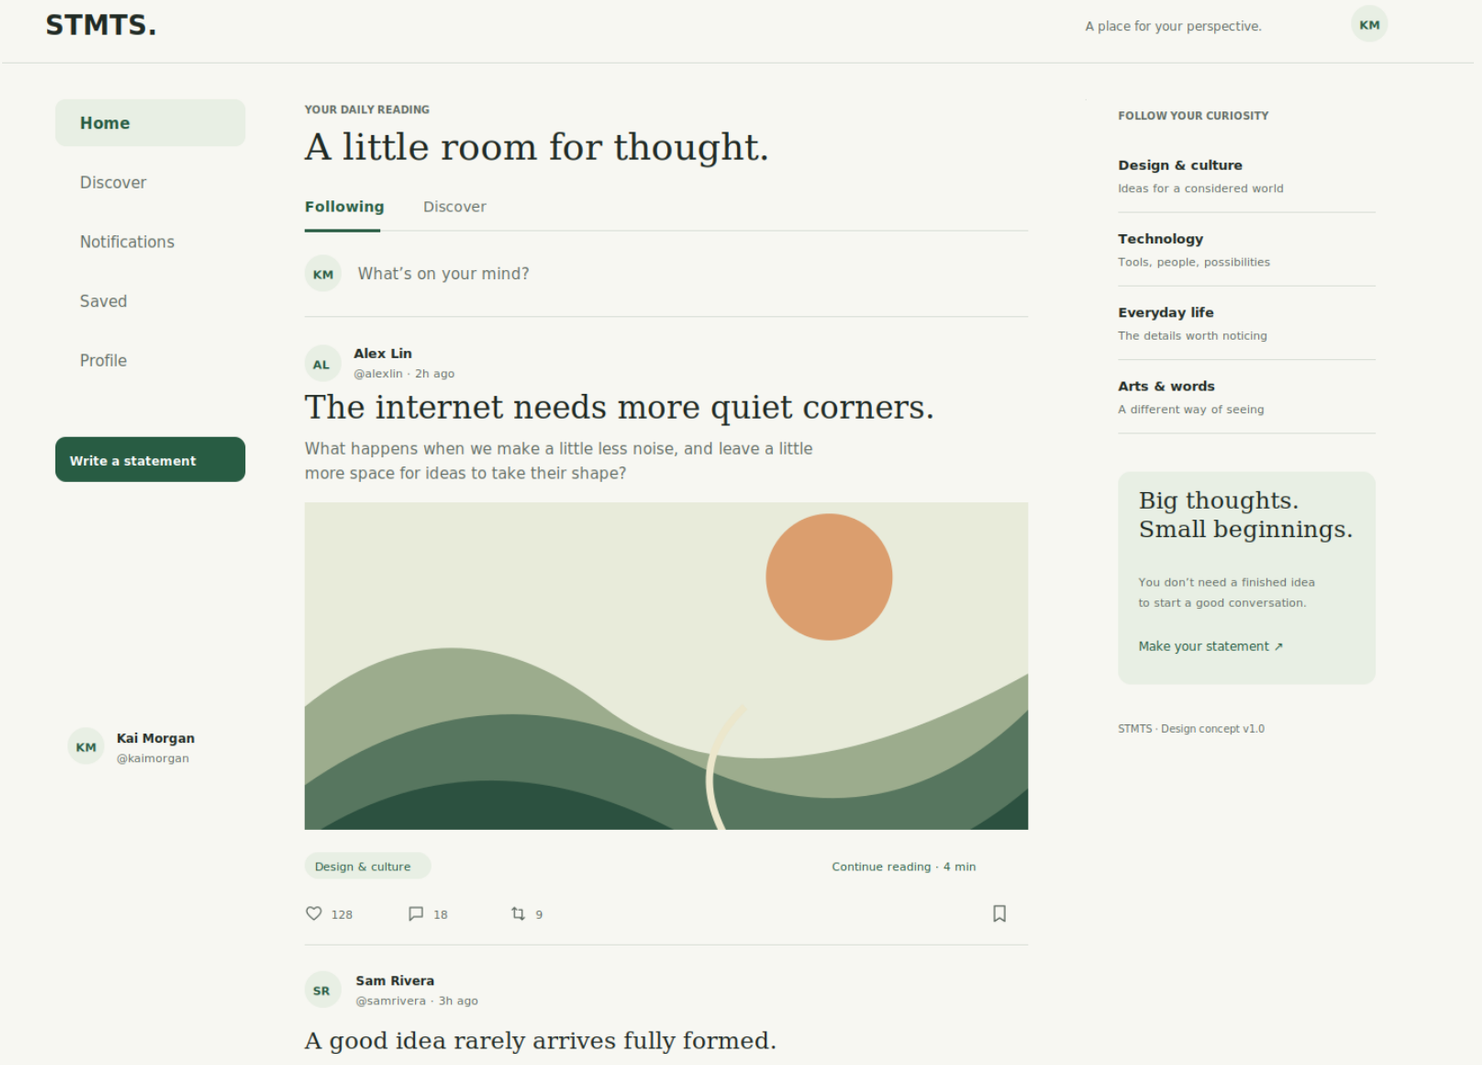

Errors preserve the work

Draft text and media survive failures. Offline means Saved on this device. Conflicts preserve both copies.

TARGETS: WEB / iOS 44 UNITS · ANDROID 48dp · FOCUS RING 3px WITH 3px OFFSET

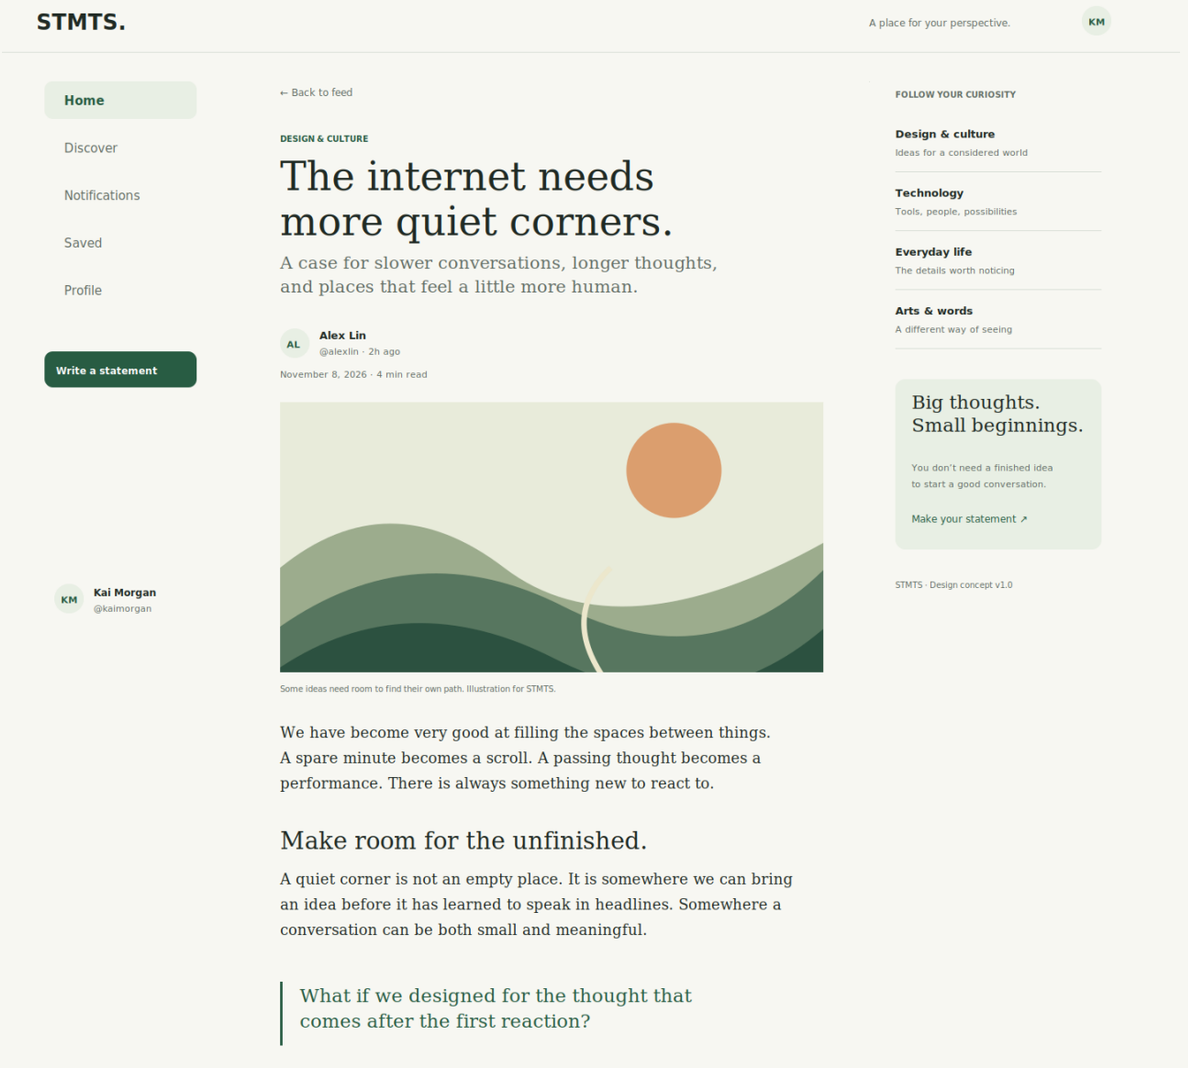

The feed: an invitation to read.

Long-form excerpts and short posts share a calm, familiar rhythm. Topic discovery moves aside before text becomes cramped.

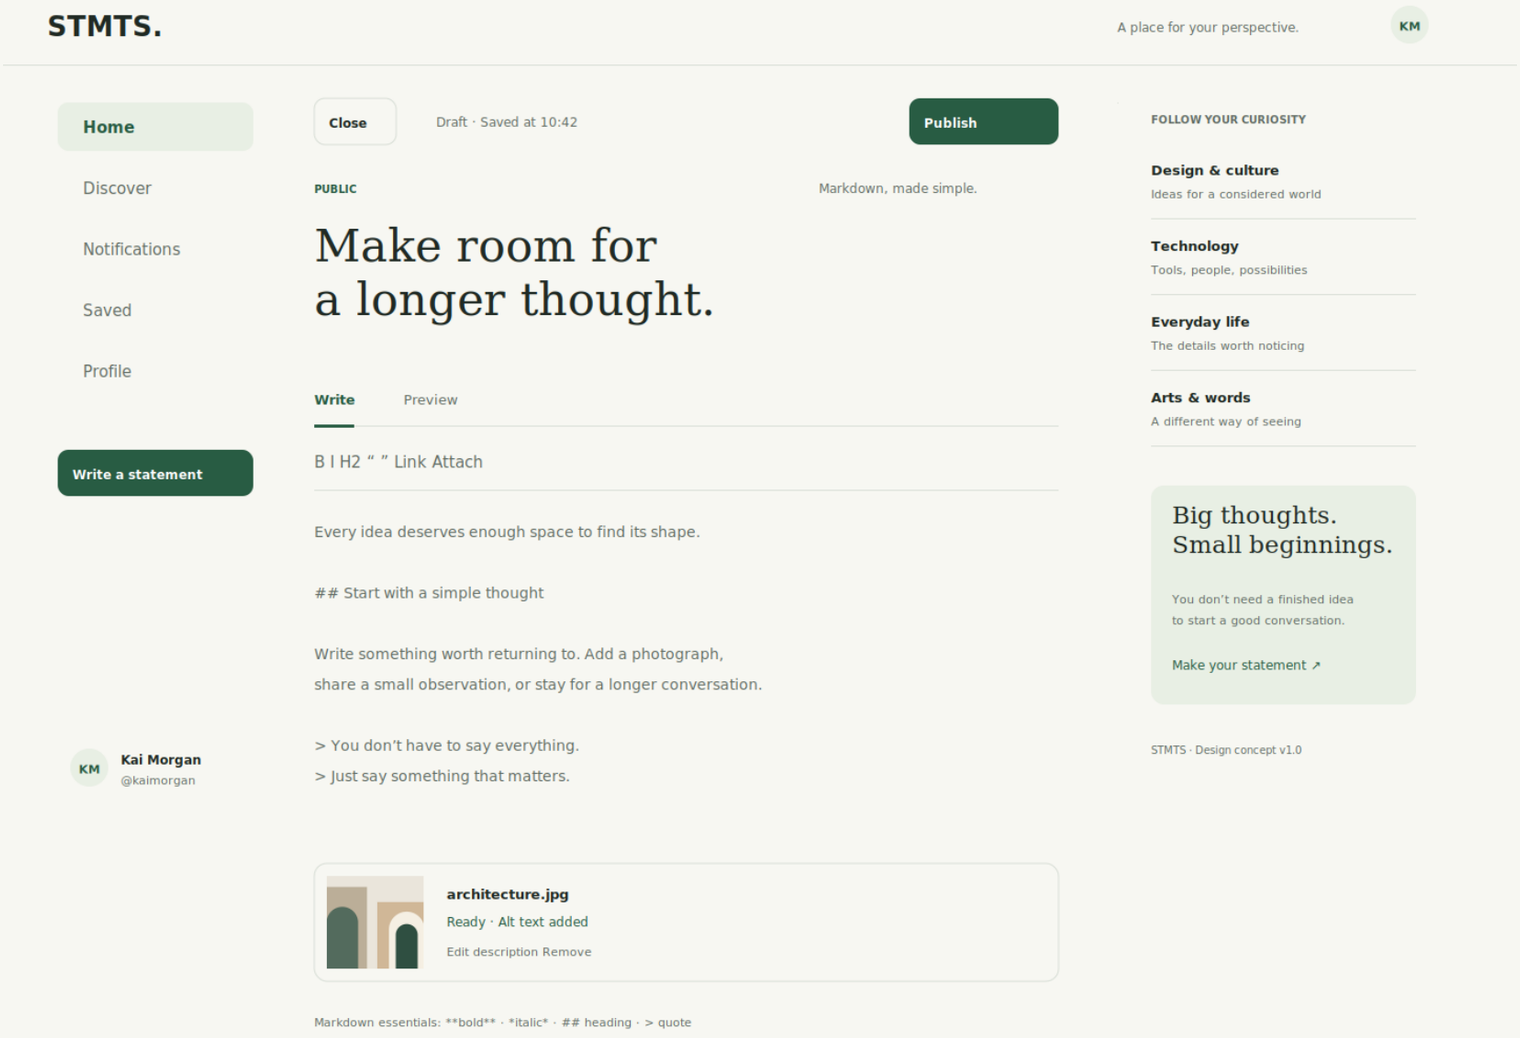

The reader: room for a complete idea.

A centered measure, honest metadata, generous body rhythm, and media that follows the author’s original proportions.

The composer: source with confidence.

Write / Preview, autosave status, selection-aware Markdown tools, accessible attachments, and explicit publish review.

One identity, native expression.

Use native navigation and platform controls. These are vector screen studies, not screenshots of running native applications.

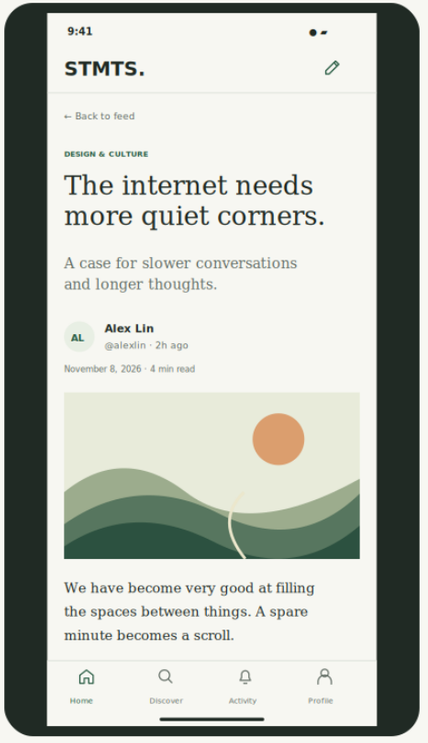

STMTS / NATIVE SCREEN STUDIES

A familiar voice.
Native to every screen.

iOS · Following

iOS · Long-form reader

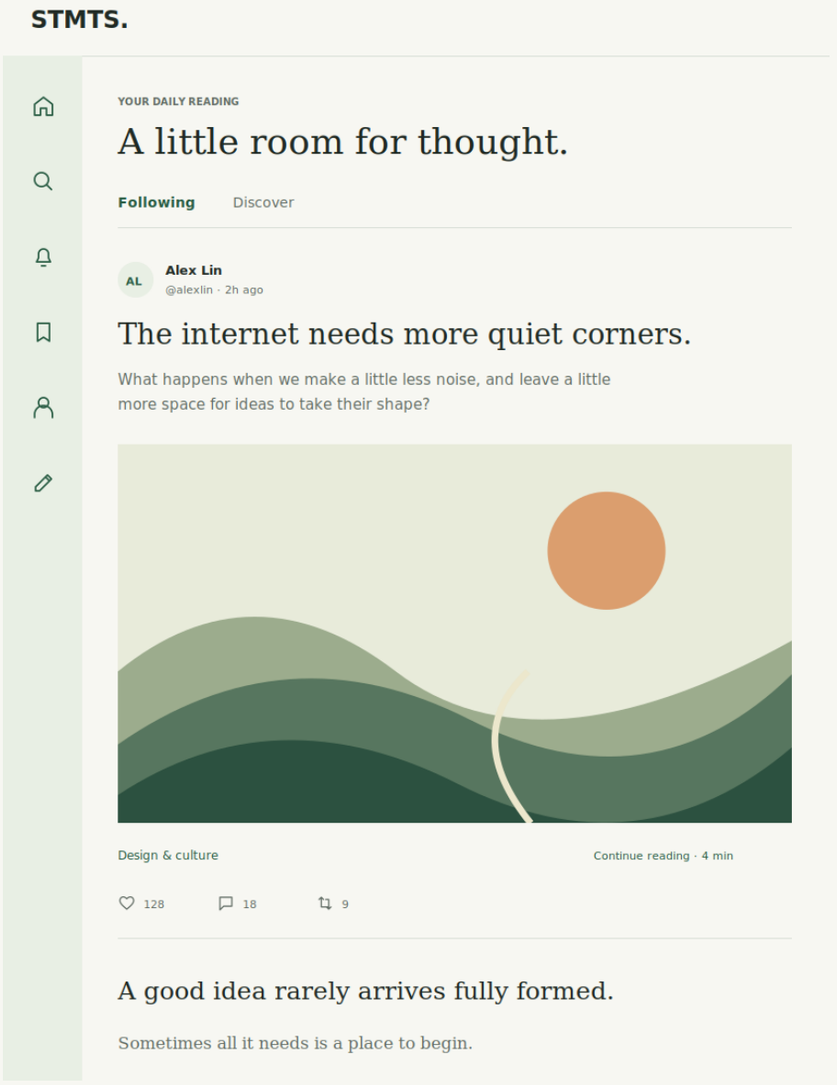

Android · Dark theme

Design for the window, not the device.

Compact: one column. Medium: navigation rail. Expanded: labeled navigation and optional discovery rail.

Compact / under 768 CSS px

16px gutters, bottom navigation, full-screen reader and composer. Reserve safe-area and keyboard space.

Medium / 768–1199 CSS px

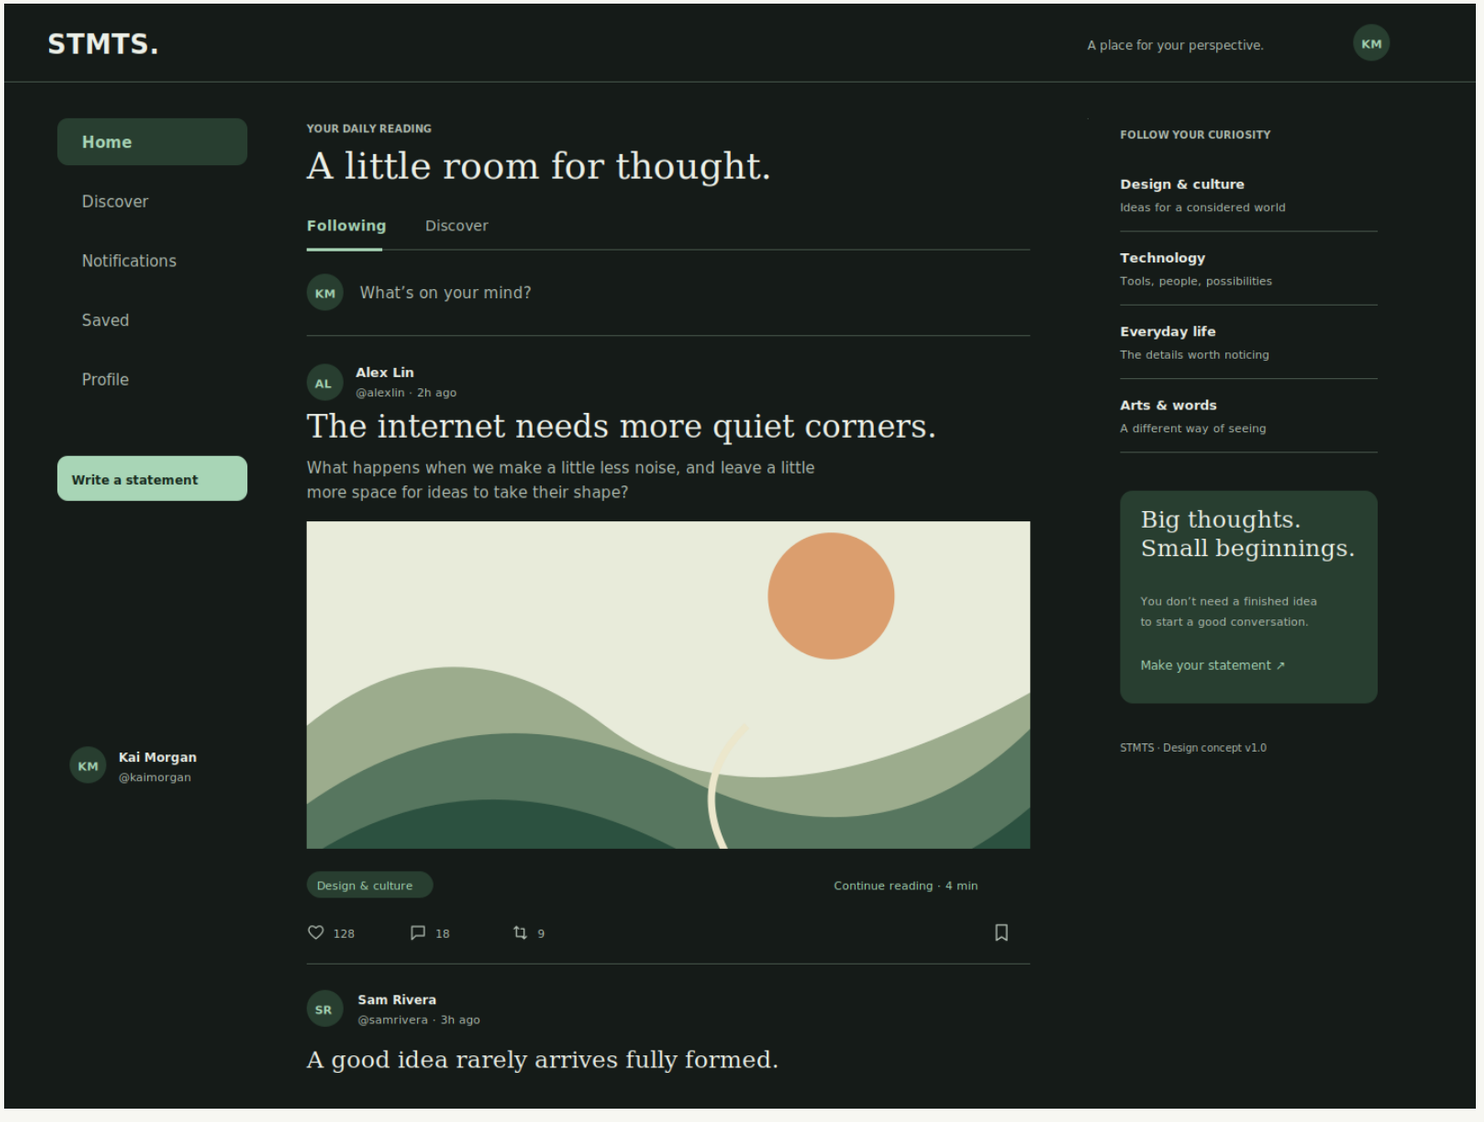

80px rail with a readable content column. iPad Split View and Android window size drive the adaptation.

Expanded / 1200 CSS px and above

216px navigation, feed up to 680px, optional 272px rail, 24px gaps; shell max 1280px. Reader stays at 68ch.

The same rhythm, after dark.

Dark mode uses a softened foreground, elevated charcoal surfaces and a pale green action color with dark text.

Markdown is the source. Structure is shared.

See spec/PRODUCT_SPEC.md for normative requirement IDs. Product limits below are proposed STMTS defaults.

Supported writing

CommonMark baseline plus tables, strikethrough and read-only task lists. Headings, lists, quotes, code and safe links. No raw HTML, arbitrary embeds or executable diagrams.

One content model

Optional title (160 code points), summary (280), body (50,000). A short post is titleless, at most 500 code points, and paragraph-only. Media references are authorized attachment IDs.

Media with an accessible path

Up to four images OR one video. Images need alt text or an explicit decorative flag. Video requires captions/transcript when audio conveys information. Never autoplay.

A reliable publication flow

Local snapshot, revisioned remote save, conflict recovery, canonical server preview, media-ready checks, explicit review, idempotent publish and confirmed-success cleanup.

Security: escape text leaves, validate URL schemes and attachment ownership, and sanitize derived output. Never trust user HTML or bypass Angular’s trust model.

Build a vertical slice. Verify the states.

The machine-readable and editable files are the implementation source. This guide communicates the visual system and central screen studies.

01 Read the contract

README.md → DESIGN_GUIDE.md → spec/PRODUCT_SPEC.md → tokens/design-tokens.json.

02 Start with the reader

Implement shared tokens, PostCard and Reader on all clients. Use the same canonical content fixture.

03 Make writing durable

Add local drafts, revisioned saves, safe preview, attachment processing and idempotent publication.

04 Verify beyond the happy path

Run ACCEPTANCE.feature and shared Markdown fixtures. Test offline, large text, both themes, keyboard, screen readers and real devices.

Production projects, full API, media processing and app-store asset sets are not included. The HTML is a local reference; Angular/SwiftUI/Compose files are integration starters.

The next engineer has a map.

The complete ZIP contains the design guide, normative product spec, acceptance scenarios, source assets, semantic CSS, JSON tokens, integration examples and visual studies.
